World Space Week Implementation Report 2019 (October 4-10)

The world celebrates World Space Week every year, with the theme "The Moon: A Gate to the Stars". With this human step, human existence is no longer confined to the Earth for the first time since our existence about 200,000 years ago. This theme is dedicated to focusing on Earth's closest neighbors in space, in celebration of the astounding achievement of landing on the moon, and also to reflect on the value and importance of the moon in the future space endeavors of mankind.

The United Nations General Assembly adopted resolution 54/68 in December 1999, to organize World Space Week from 4 to 10 October to celebrate each year internationally the contributions of space science and technology to the improvement of the human condition. On October 4, 1957, the first man-made surface-to-surface rocket, Sputnik 1, was launched, opening space for space exploration. 10 October 1967 was also the day of entry into force of the Treaty on Principles Governing the
