Wisdom about space

Human life does not begin in the womb, nor does it end in front of the grave, and this wide space filled with the rays of the moon and planets is not without souls embracing love and souls in solidarity with understanding.

Lama Ahmed 2-1

The Space:

Outer Space means that the region outside the upper boundary of the atmosphere of the planet which is located a hundred kilometers from this planet, and this region is known as a vacuum; where it is considered an empty antenna because it does not carry any air for breathing or for light scattering in it.
