

Today, Wednesday, October 4, 2023, the world celebrates “World Space Week,” which is the largest annual space-related event in the world, to educate the public about space activities, and to enhance international cooperation in raising awareness and teaching about space issues.

Space and Entrepreneurship” is the slogan of the High Space Week 2023“

World Space Week.

World Space Week 2023 focuses on the theme “Space and Entrepreneurship”, due to the growing importance of the space industry for commercial purposes, the growing opportunities for space entrepreneurship and the new benefits of space developed by astronauts. As small companies are now able to build and launch a small satellite, entrepreneurs can create valuable new databases that benefit governments and the space industry.

World Space Week 2023 will inspire students around the world to study STEM and business and will provide space companies with the opportunity to recruit the workforce needed for the expanding commercial space industry. It will also serve as a forum for important discussions on the transition of LEO to a more entrepreneurial ecosystem.
