Fun Facts about Space..

Space has its own weather: Space weather is caused by solar wind from the sun, which interacts with Earth's magnetic field, creating phenomena like the auroras (Northern and Southern Lights). Solar Flares and coronal mass ejections can also disrupt satellite communications and power grids on Earth.

You can cry in space, but the tears don't fall.

They may be a "diamond planet": Scientists have discovered an exoplanet called 55 Cancri e that's largely made of carbon, which may be crystallized into diamond due to the planet's high pressure and heat.

A day on Jupiter lasts only 10 hours. Jupiter, the largest planet in our solar system, has the fastest rotation.

Space is not completely empty: It may seem like a vacuum, but space contains tiny particles of gas, dust and other matter. In some regions, especially around stars, there's even a dense accumulation of material like plasma.

The largest volcano in the solar system is on Mars.
